CHAPTER 1

INTRODUCTION

Web design is the visual aesthetics and page layout of a website. It goes hand-in-hand with web development the creation of a static website or dynamic web application.

Web **design** is a process of conceptualizing, planning, and building a collection of electronic files that determine the layout, colors, text styles, structure, graphics, images, and use of interactive features that deliver pages to your site visitors.

A **website** or **web** site is a collection of related network **web** resources, such as **web** pages, multimedia content, which are typically identified with a common domain name, and published on at least one **web** server. ... They may incorporate elements from other **websites** with suitable markup anchors

A **website** is a collection of publicly accessible, interlinked **Web** pages that share a single domain name. **Websites** can be created and maintained by an individual, group, business or organization to serve a variety of purposes. Together, all publicly accessible **websites** constitute the World Wide **Web**.

Even if you don't consider yourself a creative person, it's still a good idea to learn web design. No matter whether you want to <u>make static websites</u> or dynamic web applications, design is an important part of the process. The design is the first thing people notice when they arrive on a website, and if it's not good enough, they'll leave. You don't want to create a site that frustrates people, do you?

If you do identify yourself as a creative person, you might even consider a career as a web designer. Today, there is a huge need for competent web designers with up-to-date skills. It's not an opportunity to be sneezed at,Learn coding and you'll be a valuable asset to many. But learn coding and design and you'll be second to none!

PHASES OF WEBSITE DESIGNING

1.1-HOME

The homepage or home page is the name of the main page of a <u>website</u> where visitors can find <u>hyperlinks</u> to other pages on the site. By default, the homepage on all <u>web</u> <u>servers</u> is <u>index.html</u>, however, can also be index.htm, index.php, or whatever the developer decides.

Thus, a website homepage isn't like the cover of a book. Every page on the website is responsible for creating a first impression and communicating the primary goal of the site. Every page also has the responsibility to tell visitors where they are and what else they can do while they're visiting the site.

Home pages are located in the root directory of the website. Many home pages act as a virtual directory for a site — they provide top-level menus where visitors can go deeper into various areas of the site. For instance, a typical website has a homepage with menu items like "about," "contact," "products," "services," "press" or "news."

In addition, the home page often serves to orient visitors by providing titles, headlines and images and visuals that show what the website is about, and in some cases, who owns it and maintains it. One of the best examples is the average business website, which has the business name in a prominent place, and often features the logo, while also showing pictures related to that business, for instance, who works there, what the business produces, or what it does in a community.

1.2. ABOUT US

The about us page is commonly used by all types of businesses to give customers more insight into who is involved with a given business and exactly what it does. The history of a business is often provided, and the histories of the people in charge are usually expressed through short articles, usually accompanied by photographs.

Depending on the specific company, some information about goals, attitude or other aspects of culture that aren't strictly tied to business practices are included as well. The about us page is often a reflection of the purpose and personality of the business and its owners or top employees.

Finally, the page can also incorporate contact or locational information. One way to view the about us concept is as a text self-portrait or short autobiography created by a business.

1.3.CONTACT US

A **contact page** is a standard **web page** on a **website** used to allow the visitor to **contact** the **website** owner or people who are responsible for the maintenance of the **site**. ... a **contact** form with entries where the visitor can fill in their name, subject and message and send or reset it.

a description of personalia like a (organization) name, address, zip code, residential area, with sometimes a map indicating a certain physical location and a description or visualization of how to get there;

a set of visual icons or textual links to social networking services;

a <u>contact form</u> with entries where the visitor can fill in their name, subject and message and send or reset it.

1.4.OUR LIBRARY

A web library is a derived or work record the name of which starts with WEBLIB_. All PeopleSoft I.Scripts are embedded in records of this type. An i.Script is a specialized People Code function that generates dynamic web content. Administrators should make sure that users have the proper access to web libraries.

For example, the default navigation system for PeopleSoft Pure Internet Architecture users is implemented by means of a web library. If users do not have the proper authorization to the web library and its associated scripts, then they won't have proper access to the system. If users are not authorized for a particular web library or script, then they can't invoke it. After you add a web library, you set the access for each script function individually. Invoking an iScript requires sthe assembly of a URL. Developers assemble the URL by using People.

A sign in page is of extreme importance to web and app design, especially for online stores or e-commerce websites.. A creative and attractive sign in page will quickly catch the user's attention, direct a high volume of visitors to your website, and increase customer base. Most login pages include elements such as username, password, and a highlighted CTA.

Seeing that designing a sign in screen can be tricky and time-consuming, and as a leading design platform all around the world, Mock plus has always been committed to collecting a variety of excellent design resources and free templates for designers. So today, we picked some elegant and efficient login page examples and free responsive login templates built with HTML and CSS. Hope you all will like this collection.

1.6.JOIN US

join us" means "you may join us" or "you are allowed to join us". sdsssHowever, I wonder if I can use it to greet somebody in a friendly way, to show that I am glad that they can join us. If I cannot use this sentence in such a situation, then what's the alternatives.

2.OBJECTIVES

- Weight loss
- Hold yourself accountable to control your food intake
- Detection of allergic reactions
- Eat healthily
- Analyze your eating habits
- Keep track of your calories
- Record your food buddies
- Increase Awareness of your food intake
- Control your food intake
- Compare your perception vs reality

4. CONCLUSION

By doing this website we conclude that A **food diary** is a record of **foods** that you eat on a meal-by-meal, daily, or weekly basis. You can include nutritional or other dietary information, organize and track **foods** by **food** group, and so on. This lets you monitor what, when, and how often you eat, as well as where your nutrition needs lie.

Most experts agree that the secret to successful food journaling is accuracy and consistency. So, what should you record? A basic food diary should include the following:

- What are you eating? Write down the specific food and beverage consumed and how it is prepared (baked, broiled, fried, etc.). Include any sauces, condiments, dressings, or toppings.
- **How much are you eating?** List the amount in household measures (cups, teaspoons, tablespoons) or in ounces. If possible, it is best to weigh and measure your food. If you are away from home, do your best to estimate the portion.
- When are you eating? Noting the time that you're eating can be very helpful in identifying potentially problematic times, such as late-night snacking.
 - Jotting down where you're eating, what else you're doing while you're eating, and how you're feeling while eating can help you understand some of your habits and offer additional insight.

- Where are you eating? Record the specific place you are consuming food, whether it's at the kitchen table, in your bedroom, in the car, walking down the street, at a restaurant, or at a friend's home.
- What else are you doing while eating? Are you on the computer, watching TV, or talking with a family member or a friend?
- Who are you eating with? Are you eating with your spouse, children, friend, or a colleague, or are you alone?
- **How are you feeling as you're eating?** Are you happy, sad, stressed, anxious, lonely, bored, tired?
